

Every known object in space consists of energy under various pressures. These are particles. All particles are rotating at some rate. Tension between particles(gravity) creates a fabric across the universe. Extreme gravitational states produce things like tornados or atomic explosions.

$$\frac{P_1 V_1}{T_1} = \frac{P_2 V_2}{T_2}$$

Even at the smallest scale, all matter is energy. The purest form of energy is Titan energy. Titan energy under high pressure creates matter.

$$E_{\text{photon energy}} = C_{\text{charge}} = (m_{\text{matter}}) \times (c_{\text{speed of light}})^2$$

Consider net 0 forces.

There are many forms of Titan energy at different pressures.

<u>Energy</u>	<u>Color</u>	<u>Audience</u>	<u>Type</u>	<u>Location</u>	<u>Level</u>	<u>Notes</u>
Kronos	Black & Gray	Earth	Family	Afghanistan	Low	Timeless, endless, Goku's ancestor. Looks like Tialmut, Savion, Surashi or Pan without food. The original made by future Olympus. Neil deGrasse Tyson ("the boy") called it dark matter, potential energy.
Goku	Blue	Pan/Creator	State	Michigan, Ann Arbor	Medium	Governance, machinery
Goku	Red & Purple	Space	Religious/Spiritual	Chile, North-Central	High	

Capital of earth is in Uganda.
